ORGANIC PROCESS TECHNOLOGY (17241201)

Category	Title	Code	Credits-3			Theory Paper
			L	T	P	
Departmental Core-DC	Organic Process Technology	17241201	3	-	-	Max.Marks-30 Duration-2hrs.

Course Objective:

The purpose of the organic process technology course is to improve knowledge of the chemical processes along with emphasis on recent technological development.

Syllabus:

Unit-I: Pulp and paper industry-Raw Materials, types of pulp and its preparation, Manufacturing of paper, Agro based industries, Fermentation industry, Alcohol by fermentation, Citric acid and Antibiotics like Penicillin.

Unit-II: Intermediates for petrochemicals from petroleum based stocks, phenol, methanol, ethylene propylene, aromatic, toluene and xylene, polymer industries.

Unit-III: Preparation, manufacturing and properties of Fats and oil, manmade fiber; rayon, polyester polyamides and acrylics, cellulose and acetate, Rubber industries, Soap and detergent. Insecticides and pesticides, Dyes and dyes intermediate.

Unit-IV: Carbon Technology: Introduction, Classification of activated carbons, raw materials and manufacture of activated carbons, classification of carbon fibers, precursors for carbon fibers, manufacture of carbon fibers from polyacrylonitrile, manufacture of carbon black by furnace black process, applications.

Unit-V: Nanotechnology: Introduction, properties of Nano particles like optical properties, reactivity, synthesis, Introduction, Structure and properties of carbon Nano-tubes and fabrication of carbon Nano-tubes & applications.

Course Outcomes: After the completion of this course, Students will be able to

CO1: **Explain** the processing of natural products.

CO2: **Describe** microbial processes and edible oil refining process.

CO3: **Elaborate** the processes for producing petrochemicals.

CO4: **Characterize** polymers and elaborate its production processes.

CO5: **Describe** the production processes of fibers.

CO6: Evaluate the different processes from economical aspects.

CHEMICAL ENGINEERING THERMODYNAMICS (17241202)

Category	Title	Code	Credits-3			Theory Paper
			L	T	P	
Departmental Core-DC	Chemical Engineering Thermodynamics	17241202	2	1	-	Max.Marks-30 Duration-2hrs.

Course Objective:

To understand the basic concepts and applications of classical thermodynamics, thermodynamic properties, equations of state, methods used to describe and predict phase and chemical equilibria.

Syllabus

Unit- I The First law of Thermodynamics and Equations of State: Steady and unsteady closed and flow process, Critical properties corresponding state, Compressibility, P-V-T behavior of pure fluids, Virial-equations, Generalized correlations and eccentric factor.

Unit-II The Second and Third Law of Thermodynamics: Entropy of various systems, Thermodynamics equations, Effect of pressure on specific heat, Joule-Thompson effect, Third law of thermodynamics, Compression of ideal gas, Refrigeration capacity, Carnot cycle, Vapor compression cycle, Air refrigeration cycle.

Unit-III Thermodynamic Properties of Fluids: Thermodynamic properties of homogeneous mixtures, Property relations for systems of variable compositions, Partial properties, Fugacity and Fugacity coefficient in ideal solutions, Properties change of mixing, Activity, Heat effects of mixing process, Excess properties, Activity coefficient of gaseous mixtures.

Unit-IV Phase Equilibria: Criteria of phase equilibrium and stability, Phase equilibrium in single component system, Phase rule, Gibbs-Duhem's equation, Vapor-liquid equilibria.

Unit- V Chemical Reaction Equilibria: Chemical potential, Effect of pressure and temperature on heat of reaction and on free energy, Van't Hoff's equation, Clausius-Clapeyron equation, Chemical Reaction Equilibria and its applications

Course Outcomes: After the successful completion of this course, students will be able to

CO1: infer the fundamental concepts of thermodynamics to chemical engineering applications.

CO2: explain the first and second laws of thermodynamics with their practical implications.

CO3: analyze the processes involving refrigeration and compression.

CO4: classify the thermodynamic properties of solutions with their relationships.

CO5: infer the detail of vapor liquid equilibria and its use in practical situations.

CO6: analyze the chemical equilibrium with thermodynamics for predicting behavior of reacting systems.

HEAT TRANSFER OPERATIONS (17241203)

Category	Title	Code	Credits-3			Theory Paper
			L	T	P	
Departmental Core-DC	Heat Transfer Operations	17241203	2	1	-	Max.Marks-30 Duration-2hrs.

Course Objective:

To understand the fundamentals of heat transfer mechanisms in fluids and solids and theirapplications in various heat transfer equipment in process industries.

Syllabus:

Unit – I: Modes of heat transfer one-dimensional and two dimensional, heat rate equations, theory of insulation, critical radius calculations, types of insulation material, conduction through slab, cylindrical and sphere.

Unit-II: Consecutive heat transfer, heat transfer in boundary layer and in film, natural and forced convection, co/ counter /cross current contacting for heat transfer, individual and overall heat transfer coefficient, fouling factor.

Unit- III: Radiative heat transfer, Black body radiation, concept of shape factor, method of determination of shape factor, radiation exchange in enclosure with black surfaces.

Unit-IV: Heat transfer under phase change conditions, boiling and condensation of pure components, heat flux temperature diagram for boiling and condensation under vertical and horizontal surfaces, nucleate and pool boiling, effect of surface condition of condensation, correlation for heat transfer under condensation. Evaporation: Types of evaporators and their applications, single and multiple effect evaporators, Design and operation of forward, backward and mixed feed operations, effect of boiling point elevation and hydrostatic heat vapor recompression.

Unit- V: Heat exchange equipment- General design of shell and tube exchangers, condensers, extended surface equipment, heat exchanger equation – coli to fluid, jacket to fluid, double pipe, shell and finned tube heat exchanger.

Course Outcomes: After the completion of this course, Students will be able to

CO1: Explain the mechanism of heat transfer by conduction, convection and radiation.
CO2: **List** dimensionless Numbers applicable in heat transfer and their physical significance.
CO3: **Illustrate** individual and overall heat transfer coefficient.
CO4: **Explain** all parts of the Heat Exchangers and Evaporators.
CO5: **Analyze** the design of various types of Heat exchangers.
CO6: Analyze the design of various types of Evaporators.

MASS TRANSFER OPERATIONS – I (17241204)

Category	Title	Code	Credits-3			Theory Paper
			L	T	P	
Departmental Core-DC	Mass Transfer Operations – I	17241204	2	1	-	Max.Marks-30 Duration-2hrs.

Course Objective: The purpose of this course is to introduce the undergraduate students with the most important separation equipments in the process industry, and provide proper understanding of unit operations.

Syllabus:

Unit-I: Diffusion Phenomenon: Molecular and eddy diffusion in gases, liquid and solids, interface mass transfer, Mass transfer theories; film theory, penetration theory and surface renewal theory, Concept of mass transfer coefficient: Individual and film coefficients, overall mass transfer coefficient and their inter relationship. Continuous contact and differential contact.

Unit –II: Absorption: Absorption in continuous contact columns, co- current, counter current and cross current contacting of fluids, Absorption in packed column, calculation ofNTU and HTU, concept of HETP.

Unit –III: Humidification: Humidification: general theory , psychometric chart, fundamental concepts in humidification and dehumidification, wet bulb temperature adiabatic saturation temperature, measurement of humidification calculation of humidification operation, cooling tower and related equipments.

UNIT- IV: Drying: Equilibrium mechanism, theory of drying, drying rate curve, batch and continuous drying for tray dryers, drum dryers, spray and tunnel dryers.

Unit-V: Crystallization: Factor governing nucleation and crystal growth rate, controlled-growthof crystals, super saturation curve, principal and design of batch and continuous type equipment.

Course Outcomes: After the completion of this course, Students will be able to:

CO1: **Explain** the basics of absorption, humidification, drying, crystallization & diffusion.
CO2: **Identify** the necessary information required in design of mass transfer equipment.
CO3: **Analyze** the different cases of diffusion phenomena.
CO4: **Compute** the parameters for mass transfer operations
CO5: **Solve** drying and humidification problems using psychometric charts & equilibrium data.
CO6: **Analyze** favorable conditions for a separation to be carried out.

MATRICES, DIFFERENTIAL EQUATIONS & VECTOR CALCULUS (17241205)

Category	Title	Code	Credits-3			Theory Paper
			L	T	P	
Basic Science Course - BSC	Matrices, Differential Equations & Vector Calculus	17241105	3	-	-	Max.Marks-30 Duration-2hrs.

Objective of Course

- To understand the concept Matrices and its applications
- To understand the various aspect of algebraic structures'
- To perceive the transform techniques in engineering problems
- To expose the concept of ordinary and partial differential equations
- To explore the Vector Calculus

Unit 1: Matrix

Matrix, Rank of Matrix, Echelon form, Normal form of matrix, Solution of simultaneous equation by elementary transformation, Consistency of equation,linear dependent vectors and linear independent vectors, Eigen values and Eigen vectors, Cayley Hamilton theorem and its application to find inverse of matrix.

Unit 2: Ordinary Differential equations

Ordinary differential equations of first and higher order, Linear higher order differential equation with constant coefficients, Homogeneous linear differential equation

Unit 3: Second Order Differential equations

Second order differential equations with variable coefficients, Methods: one integral is known, Removable of first derivative, changing of independent variable and variation of parameters & series solution.

Unit 4: Partial Differential equations

Linear and Non-Linear Partial differential equations of first and second order with constant coefficients, Separation of variable method, Application in solution of wave and heat conduction equations (one-dimensional)

Unit 5: Vector calculus

Vector differentiation, Divergence, Gradient and Curl, Directional derivative, Solenoidal and Irrotational vectors, line integration, Vector Integration, Gauss divergence theorem and Stoke's theorem

Course Outcomes

After completing this course, the students will be able to:

CO's	Description of CO's
CO1	Determine the solution of Matrix
CO2	Solve the differential equations by various methods
CO3	Solve Ordinary Differential Equation of Second Order.
CO4	Solve Partial Differential equations application for various engineering problems.
CO5	Use and application of vector calculus

SUSTAINABILITY & ENVIRONMENTAL SCIENCE (17241212)

Category	Title	Code	Credits - GRADE			Theory Paper
			L	T	P	
Mandatory Audit Course - MAC	Sustainability & Environmental Science	17241212	2	-	-	Max.Marks-30 Duration- 1.5 hrs.

Course Objectives:

To equip students with a comprehensive understanding of environmental science, pollution control, sustainability, and global frameworks, enabling them to analyze environmental challenges and contribute to sustainable solutions through informed decision-making and responsible practices.

SYLLABUS

Unit I

Introduction to Environmental Science: definition, importance and its components. Ecosystem and its components. Water cycle, carbon cycle, food chain, energy flow in ecosystem. Current state of environment in India and world; Underlying reasons (root causes) of modern environmental degradation (social, psychological, cultural)

Unit II

Environmental Pollution and Management: air, water, noise, soil, thermal and radioactive. Causes, impacts, pollution control techniques and mitigation strategies. Solid waste management: Principles of waste management, different components of waste management system and introduction to management of hazardous waste like e-waste, plastic waste. Global environmental Issues: Climate change, global warming, ozone layer depletion.

Unit III

Environmental policies and laws in India: Environmental Protection Act, Water Act, Air Act. **Overview of global environmental policies and frameworks**: Kyoto protocol, Montreal protocol, COP summits. Introduction to clean development mechanism, carbon credit, carbon trading.

Unit IV

Sustainability concepts: definition, importance, pillars of sustainability (economic, environmental, and social). Sustainable development. Overview of UN Sustainable Development Goals (SDGs) and their global relevance. Concept of circular economy, resource efficiency, energy conservation, green buildings and sustainable manufacturing.

Unit V

Sustainable Energy solutions: New Energy Sources: Need of new sources. Different types new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy. Introduction to sustainable transportation systems and sustainable water infrastructure.

Course Outcomes:

Upon completion of the course the student will be able to:

CO 1: Explain the fundamental concepts of environmental science, including ecosystems and the causes of environmental degradation.

CO 2: **Analyze** the sources, causes, and impacts of air, water, and solid waste pollution and propose appropriate mitigation strategies.

CO 3: **Evaluate** the effectiveness of environmental policies and global frameworks in addressing environmental challenges.

CO 4: **Explain** the concepts of sustainability and sustainable development goals.

CO 5: **Apply** various solutions for achieving sustainable development.

FLUID FLOW & MECHANICAL OPERATIONS LAB (17241206)

Category	Title	Code	Credits-1		
Departmental Laboratory Course-DLC	Fluid Flow & Mechanical Operations Lab	**17241206**	L	T	P
			-	-	2

List of Experiments

Experiments to be performed:

Total ten experiments; perform any four experiments from each section.

Section (A): Mechanical Operations

1. Determination of Rittinger's & Kick's constant in respect of the laboratory Jaw Crusher.

2. Determination of effectiveness of screen and perform cumulative analysis of a sample

3. Batch settling study for given slurry and determination of thickener area.

4. Determination of the efficiency of a Ball Mill/Rod Mill for grinding a material of known work index.

5. Study of the operation of a Plate and Frame Filter press in the laboratory.

Section (B): Fluid Mechanics

1. Determination of the discharge coefficient of given Venturi meter, Orificemeter and Rotameter
2. Determination of friction factor and head loss in given pipe assembly.

3. Determination of the discharge coefficient of different notches.

4. Determination of losses through pipes and fittings.

5. Determination of the pressure drop across packed column.

Course Outcomes:

CO 1: Determine the discharge coefficient and use various devices for measuring fluid flow rate.
CO 2: Develop engineering applications involving fluid.
CO 3: Analyze flow systems in terms of mass, momentum, and energy balance.
CO 4: Calculate size reduction ratio, grind ability index using ball mill and jaw crusher.
CO 5: Calculate the effectiveness of a given screen
CO 6: Compute power laws using jaw crusher.

PROBLEM SOLVING THROUGH PYTHON PROGRAMMING (17241207)

Category	Title	Code	Credits-1		
Departmental Laboratory Course-DLC	Problem Solving Through Python Programming	**17241207**	L	T	P
			-	-	2

COURSE OBJECTIVES

- To develop the understanding of algorithms, programming approaches and program documentation techniques in Python.
- To study the concepts of procedural and object oriented programming techniques in Python.
- To design and implement basic programming solutions using Python programming constructs.

Unit I

Introduction to Python: Formal and natural languages, Downloading and installing Python. Problem - solving methods and algorithm development. The first program, Variables, expressions, keywords, Operators, Expressions and statements, Interactive mode and script mode, Order of operations. Datatypes: Numeric, string, list tuple, dictionary, set.

Unit II

Function, ways of passing arguments to functions, user defined and inbuilt functions, lambda function. Control Statements: Conditional and unconditional branching, while loop, for loop, loop control statements, range function. Numeric, String, list, tuple, dictionary and set manipulation operations using loops and inbuilt manipulation functions. Packages and modules in python.

Unit III

Exception and File Handling: Errors vs exceptions, Exceptions handling with try block, handling multiple exceptions, writing your own exceptions, file handling modes, reading, writing and appending a file, Handling file exceptions.

Unit IV

Object oriented programming: Characteristics and features of OOPS, Classes and objects, constructors and destructors, defining member variables and functions, visibility modes, static members.

Unit V

Polymorphism: Introduction, Type of Polymorphism: Compile Time Polymorphism & Run Time Polymorphism, polymorphism in python. Inheritance: Introduction, Visibility Modes, Types of Inheritance: Single Level, Multilevel, Multiple, Hybrid, Multipath. Association,

Aggregation and composition. Array manipulation and visualization using numpy and matplotlib libraries.

RECOMMENDED BOOKS

- Python Crash Course: A Hands-On, Project-Based Introduction to Programming, By Eric Matthes.
- Learn Python the Hard Way: third Edition T.R. Padmanabhan, Programming with Python, Springer, first Ed., 2016.
- Kenneth Lambert, Fundamentals of Python: First Programs, Cengage Learning, first Ed., 2012.

COURSE OUTCOMES

After completion of this course, the students would be able to:

CO1. explain basic syntax and building blocks in python programming language.

CO2. solve computational problem using python programming language

CO3. hands on experience to online coding tools like colab.

CO4. design a program utilizing the features of object oriented concept.

CO5. analyze some of the libraries available for solving problems.

CO6. apply skill of identifying appropriate python constructs for problem solving.

LIST OF PROGRAMS

1. Write a program to demonstrate different number data types in python.
2. Write a program to perform different arithmetic operations on numbers in python.
3. Write a program to create, concatenate and print a string and accessing substring from a given string.
4. Write a python program to create, append and remove lists in python.
5. Write a program to demonstrate working with tuples in python.
6. Write a program to demonstrate working with dictionaries in python.
7. Write a python program to find the factorial of a number using recursion.

8. Write a program to swap two integers without using a third variable. The swapping must be done in a different method in a different class.
9. Write a program to count total number of uppercase and lowercase characters in file
10. Write a python program to define a module and import a specific function in that module to another program.

COURSE OUTCOMES

After completion of this course, the students would be able to:

CO1. solve the computational problems using python language.

CO2. apply python lists, tuples, dictionaries for representing compound data.

CO3. design a program utilizing the features of object oriented concept.

CO4. construct the Python code for real-world problems using the libraries.

MICRO PROJECT -II (17241209)

Category	Title	Code	Credits-1		
Project Based Learning - PBL	Micro Project – II	**17241209**	L	T	P
			-	-	2

List of topics

1. Synthesize organic derivatives from a primary compound.
2. Synthesize and characterize a polymer using emulsion polymerization.
3. Perform the hydrolysis of esters to form soaps (of varying composition) and glycerol.
4. Study the heat transfer characteristics of a heat exchanger.
5. Design a pitot tube to calculate the flow rate of a fluid in a pipe.
6. Develop a flow visualization set-up to observe and analyze laminar and turbulent flow regimes.
7. Assess the mixing performance of different types of impellers in a stirred tank using dye or tracer studies.
8. Compare the drying efficiency of methods such as oven drying, air drying, and microwave drying for a sample of wet powder.
9. Crystallize a compound from different solvents to compare the size and purity of the crystals obtained.
10. Design Stefan's Apparatus to study temperature affects on the diffusion rate of a solute.
11. Study the diffusion of a solute between two immiscible liquids.
12. Conduct case studies of real industrial processes, such as distillation or absorption, using thermodynamic data. Evaluate process efficiency and propose improvements.
13. Perform rate of diffusion loss of drinking water from available extinct water bodies data of a zone which can be rehabilitated.
14. To develop and study hand dryers as an application of humidification-dehumidification aiming to enhance drying efficiency and user comfort.
15. Design and test systems inspired by biological heat exchange processes and evaluate their performance in practical applications.

COURSE OUTCOMES:

After completion of course students will be able to:

CO1: Identify and formulate problems in the field of organic processes, heat and mass transfer by reviewing research literature

CO2: Design innovative solutions for organic processes, flow, heat and mass operations

CO3: Create, select, and apply appropriate modern engineering and IT tools, to address engineering tasks.

CO4: Effectively function as both an individual contributor and a team member or leader demonstrating collaboration and leadership skills.

CO5: Apply engineering ethics and managerial communication principles to effectively manage projects.

ENGINEERING PHYSICS LAB (17241210)

Category	Title	Code	Credits-1		
Engineering Science Course-ESC	Engineering Physics Lab	**17241210**	L	T	P
			-	-	2

Course Objectives: The main objective of the course is to enable the students to become familiar with the key areas of physics that are fundamental to emerging technologies and impart knowledge about Quantum mechanics, Lasers, Fiber Optics, Holography, Superconductor, Nano materials, Dielectric materials.

Unit I-Quantum mechanics
Planck's quantum hypothesis, Wave-particle duality of radiation, de-Broglie matter waves, Compton effect, Phase and group velocity, Heisenberg uncertainty principle and its applications.

Unit II -Lasers,
Properties of lasers, the basic process of lasers, Population-inversion, classification of lasers, working of He-Ne, Ruby, Nd: YAG and CO_2 lasers, Applications of Lasers in Communication, Medical and Industry.

Unit III- Fiber Optics,
Light guidance through optical fibers, the qualitative idea of critical and acceptance angle, types of fibers, numerical aperture, V-Number, intermodal &material dispersions in fiber.

UNIT IV Semiconductors & Nanomaterials :
Semiconductor basics P type-N type, Fermi function, Junction Diodes, LED and its working principle, Transistor.
Nanomaterials: Basic principle of nano science and technology, Quantum confinement effect and applications and Properties of quantum dots and Carbon nano tubes, Two-dimensional materials, Metal nano-particles.
UNIT-V Dielectrics Materials
Polar and Non-Polar Dielectrics, Dipole moment and Polarization, Dielectric constant& Polarization, Relation between electric field vectors E, P and D. applications of dielectrics.

Course outcomes: After studying the course of Engineering Physics the student will be able to:
CO1-Explain the quantum physics and applies it to the behaviour of a system at the microscopic level and solve the problems.
CO2-Interpret the requirements classification, properties and application of laser
CO3-Describe the basic concepts about optical fibers
CO4- Explain the principle, types, properties and application of semiconductors and nano-materials
CO5- Apply the knowledge of characteristic of Dielectrics and Piezoelectric materials

List of Experiments

Subject Name: Engineering Physics laboratory

Subject code

B.Tech. (First / Second Sem)

NOTE: At least 10 of the following experiments must be performed during the session.

S.No.	Aim of Experiment
1	To determine the specific charge (e/m) of an electron by Thomson method.
2	To measure the planks constant using light emitting diode.
3	To determine the energy band gap of a given sample material.
4	To measure the dielectric constant of a substance by resonance method.
5	To study and verify the outputs of various logic gates
6	To study the input and output characteristics of a transistor in common BASE/Emitter/collector (anyone) configuration
7	To study the V-I characteristics of semiconductor diode
8	To study V-I Characteristics of LED
9	To determine the numerical aperture of given optical fiber using optical fiber kit.
10	To determine the wavelength of laser light with laser educational kit.
11	To measure the optical power attenuation in the given optical fiber.
12	To determine the V-number of given optical fiber using optical fiber kit.

Course outcomes

Lab CO	Course outcome – Upon successful completion of the course, the student will be able to
CO1	**Develop** experimental skill required for application of Physics in engineering.
CO2	**Operate** different instruments specified in course safely and efficiently.
CO3	**Demonstrate** the working principles in optics, semiconductors, Quantum Physics.
CO4	**Function** as a member of a team for problem solving.

LANGUAGE LAB (17241211)

Category	Title	Code	Credits-1		
Humanities and Social Sciences including Management Courses - HSMC	Language Lab	**17241211**	L	T	P
			-	-	2

Course Objectives:

- The course intends to build the required communication skills of the students to communicate effectively in real-life situations like starting a talk and be comfortable using English language.
- It aims at teaching students to appreciate English language through the study of scientific, creative, and academic text.
- The course is designed to acquaint students with structure of English language used in literature, functional varieties, figurative language, and verbal concomitance.
- The students are expected to enrich their knowledge of language, culture, and ethics through this course.

Course Contents:

Unit I: Communication [CO1, CO2]
Communication: Approaches, Elements, Verbal and Nonverbal Communication; Barriers to Communication; Johari Communication Window.
Unit II: Listening[CO1, CO2]
Listening: Factors Affecting Listening and Improving Listening.
Unit III: Speaking: [CO2, CO3, CO5]
Public Speaking&Delivering Presentation.
Unit IV: Reading: [CO3, CO4, CO5]
Reading Passages &Comprehension:Steps and Methods.
Unit V: Writing: [CO4]
Writing: Essentials of good writing; Drafting CV/biodata/Résumé)

***Reading Material** for story and poetry is to be selected by concerned teacher in class.

Language Laboratory:
The objective of the language lab is to expose students to a variety of listening and speaking drills. This would especially benefit students who are deficient in English and it also aims at confidence building for interviews and competitive examinations. The Lab is to cover following syllabus.
1. Communication lab exercises as specified in Lab Manual
2. Listening skills (using Marc Hancock, CUP).
3. Speaking skills
4. Oral presentation.

Laboratory Tasks:

- A Separate Lab Manual is attached as Annexure-III

Course Outcomes: After successful completion of the course the student will be able to:

CO1 → Speak clearly effectively and appropriately in a public forum to a variety of audiences and purposes. (LOT1)
CO2 → Prepare oral dialogues and arguments within the Engineering Profession effectively. (LOT2)
CO3 → Demonstrate knowledge and comprehension of major text and traditions in language as well as its social, cultural, and historical context. (LOT3)
CO4 → Read a variety of Text analytically to demonstrate in writing and/or speech the interpretation of texts. (HOT4)
CO5 → Interpret text written in English assessing the results in written and oral arguments using appropriate material for support. (LOT3)
